

# How to Copy The Screen on your Wersi Organ

Initially you will require a keyboard and mouse (either USB or hard wired) to be connected to your organ. Personally I use an 'Advent' USB set purchased from PC World for around £23.00.

Once the organ is active and showing the screen of your choice, follow the procedure shown.

1. Press the **Prt Scr**  
**Sys Rq** button on the keyboard.

2. Go to 'Settings' and open Windows by pressing the appropriate tab.

3. Go to: **Start**  
**Programs**  
**Accessories**  
**Paint**

4. When the 'Paint' programme has loaded go to 'Edit' and then 'Paste'. Your chosen screen will then be shown.
5. In order to save the screen insert a floppy into the drive and then go to 'File' and then 'Save As' and 'Save In' 3 1/2 Floppy (A:) and save as a .bmp. Give the file a name and 'Save'. The file will be around 1 Mb in size.

The 'picture is now available to be used in any other programme of choice
